REACH FURTHER

EXCAVATOR: IMPRESSIVE DIGGING PERFORMANCES

Up to 7 m (22'11") Excavator reach: simply the best over the market

With an impressive excavator reach of up to 7 m (22'11"), you can always excavate further than any other backhoe loaders on the market. With fewer machine repositioning required, Mecalac backhoe loaders help you to be more productive on your job sites.

Extendable dipper : reach up to 33% further

Each machine within the Mecalac Backhoe loader range can be fitted with an optional extendable dipper. Providing up to 1.3 m (4'3") additional reach the extendable dipper increases the working area of the machine by up to 33%.

*Specifications may vary depending models

LIFT HIGHER

HIGHER AND HEAVIER

At the forefront of loading

With a class leading loader lift height of up to 3.6 m (12') and the specific kinematics to optimize visibility, the powerful front loader on the Mecalac range of backhoe loaders helps you to be productive for all the loading operations of your job sites as well as for loading high-sided trucks.

FASTER AND SAFER ON THE ROAD

ACTIVE DRIVE : SUPERIOR TRANSMISSION RESPONSIVENESS AND EFFICIENCY

Key to the Backhoe loaders success is the ability to travel between worksites with ease. The unique Mecalac Active Drive* technology enables a considerable reduction in travel time and improved roading capabilities, particularly on sloping roads. Automatically activated at high speed the Active Drive system bypasses the torque converter to allow a direct connection between the engine and the transmission in order to provide the full power and torque of the engine to the wheels, ensuring the best traction at high speed.

*Available as standard on TLB990 and as an option on TLB890 with Servo Power Synchro (Powershift) transmission

40 KM/H
25 MPH

AGILITY

Switch to **AGILITY**

EXCEPTIONAL MANOEUVRABILITY, TIGHTEST TURNING RADIUS

Each jobsite is different, however the Mecalac range of backhoe loaders offer advantages for all.

When working in confined spaces or urban jobsites, the tight turning radius of the Mecalac Backhoe Loaders allows to keep working in conditions where other backhoes cannot. How is this possible? Simply thanks to hydrostatic steering, which features a double acting steering cylinder that reduces steering effort for the operator, while offering a steering angle of up to 50 degrees. This results in the impressive turning radius and agility of the Mecalac backhoe loaders.

COMFORT AND CONVENIENCE

WELCOME ONBOARD

PRACTICAL AND PRODUCTIVE

An operator that sits in a relaxed and comfortable environment is a productive operator. That is why the Mecalac backhoe loader cab offers outstanding ergonomics, a high standard of operator comfort, plus a wealth of practical features and functions.

Once seated, the operator immediately benefits from an increased floor space, designed to provide easy and quick-seated turns. The clever and intuitive layout of all instruments and controls ensure practical and productive work conditions.

NEW MULTI FUNCTION DISPLAY: SET YOUR MACHINE PREFERENCES

The intuitive digital side display interfaces with a sophisticated control system to allow the activation and setting of a wide range of machine features. Whether you want to change machine settings (Auto idle, quick attach timer, ISO or SAE excavator

control pattern, hydraulic control sensitivity...) or operator displays (Time and date, brightness, units, language...) you have the control to make your working day more enjoyable and productive.

AS QUIET AS 78DBA

Mecalac backhoe loader cabs offer a quiet operator environment thanks to a low internal noise level as low as 78dBa.

OPERATOR COMFORT

PERSONALIZED COMFORT

At Mecalac we want to make sure that every operator can adjust their machine to feel comfortable at work. Working in a Mecalac backhoe loader cab is also enjoying a variety of adjustable equipment like the telescopic steering wheel with fully adjustable tilt height setting and the adjustable premium operator seat available with mechanical or air suspension with heating.

The simple yet functional front console features durable and easy to operate rocker switches. Whatever the type of transmission selected, the fingertip direction control provides smooth and quick forward or reverse direction changes to ensure best productivity and comfort when using the loader.

OPERATOR COMFORT

THERMAL COMFORT

VENTILATION AND VISIBILITY

Every Mecalac backhoe loader cab features large windows, which are easy to open and close from within the cab. When excavating, the rear quarter windows and the full depth rear window ensure improved ventilation and visibility for every operation.

As standard, all cabs feature a large lockable storage box to keep your food and drink fresh whatever the outdoor temperature. To ensure the best level of comfort, the high performance heating ventilation and air conditioning system featuring 14 nozzles is available as an option on all models.

VISIBILITY

YOUR OFFICE WITH A VIEW

ALL AROUND VISIBILITY

No matter what the machine is used for, the large glass areas provide the operator with excellent visibility for increased productivity and safety.

The unique loader kinematics with a single centrally located bucket cylinder makes the bucket corners always visible for all the loader operations. When it comes to loading trucks, the additional high-level roof window offers enhanced visibility to fully raised loader bucket.

BACK

VISIBILITY

ANYWHERE, AT ANYTIME

8 LED WORKLIGHTS

Eight adjustable LED work lights are fitted as standard on all Mecalac backhoe loaders. This ensures the best visibility, safety and productivity when working at night or in low light situations.

SAFETY

LOADER AND BACKHOE LOCKED

LOADER LOCKED

When carrying out tasks that require the loader to be raised and remain in a safe position the standard integrated cylinder strut can easily be installed by removing a single pin.

SAFELY ON THE ROAD

The Mecalac dual transport lock of the backhoe is the safest and simplest boom lock of the market. Operated by a single switch or lever within the cabin, the boom and the slew can be locked in a safe transport position within seconds.

SAFETY

PROTECTED OPERATORS

MAXIMUM CAB SAFETY

All cabs are ROPS and FOPS approved to ISO standards to ensure the best level of safety for the operator. In terms of accessibility, the wide opening door, grab handles and self-cleaning steps makes access easy from either side of the cab.

SERVICEABILITY

EASY ACCESS TO EVERYTHING

FROM GROUND LEVEL & LOADER LOWERED

At Mecalac it is important that the operator is able to carry out the machine daily checks in a safe and efficient manner. The single piece hinged bonnet allows easy access to routine maintenance points such as engine and transmission oil levels, most importantly these checks can be carried out with the operator's feet on the ground and with the front loader lowered.

- Tool-free access to routine maintenance points ✓
- All daily checks possible from ground level with loader lowered ✓
- Fully opening one-piece front hood to provide the easiest access ✓
- Loader safety strut as standard if further access required ✓
- Externally adjustable dipper wear pads for easy servicing and replacement ✓
- Lubrication free backhoe inner slide wear pads ✓

SERVICEABILITY

MINIMAL MAINTENANCE

PERFORMANCE WITH ECONOMY

When you choose a Mecalac backhoe loader, you choose high performance and proven engines widely used throughout the construction industry, with a global service support. Turbo charged and charge air-cooled, our engines are designed and developed to give you reliability, quiet operation and many hours of dependable power with economy.

BUILT FOR MINIMAL MAINTENANCE

The unique loader kinematics of the Mecalac backhoe loaders features a single bucket cylinder to provide the best performances with fewer components. This unique design allows to radically reduce the number of grease points by up to 40%, saving time and money.

TLB SERIES

OPTIMAL PERFORMANCE

THE ROBUST MECALAC PLATFORM

The Mecalac backhoe loader is built on an industry acclaimed chassis with a proven track record for durability, reliability and safety. Further stability is added via the hard cast nose counterweight providing weight distribution and component protection.

OPTIMAL PERFORMANCE

POWERFUL EFFICIENCY

By producing high levels of power of up to 82 kW (110 hp) and torque of up to 450 Nm (332 lbf) power is provided to get things done with economy and efficiency.

For ultimate efficiency, the Mecalac TLB870 is our entry-level backhoe loader featuring a 55 kW (74 hp) engine to provide excellent excavator performances but with a low fuel consumption related to its low power engine.

CLEANER POWER

Mecalac Backhoe loaders feature state-of-the-art engine technologies to deliver the highest efficiency in a small package. To meet the latest EU STAGE V / U.S. EPA TIER 4 FINAL emission regulations, Mecalac backhoe loaders integrate a combination of exhaust after treatment technologies, including a Diesel Oxidation Catalyst (DOC), an integrated and service free Diesel Particle Filter (DPF) with 8,000 hours exchange life, and a Selective Catalytic Reduction (SCR), except on the TLB870.

AUTO IDLE, POWERFUL ECONOMY

Available on the Mecalac TLB890 and TLB990, the Auto Idle function reduces the engine speed automatically when there is no load on the hydraulic system, helping to lower fuel consumption. Once the hydraulic load increases, the engine speed returns to the level previously set by the rotary throttle control.

OPTIMAL PERFORMANCE

PERFORMANCES BACKHOE

IMPRESSIVE DIGGING PERFORMANCES

With an impressive ground level reach of up to 7 m (22'11") and a dig depth of up to 5.7 m (18'8") the Mecalac backhoe loader clearly outperforms any backhoe of its size. The remarkable digging force of up to 42 kN (9442 lbf) and the high bucket force of up to 69 kN (15512 lbf) make Mecalac backhoe loaders productive even in the toughest conditions. To ensure an extra 1.3 m (4'3") reach and depth and to minimize repositioning, the extendable dipper is available on all Mecalac models.

SIMPLE SIDESHIFT

All sideshift backhoe loaders from Mecalac feature a hydraulic clamping system with large clamp retraction that ensures easy repositioning of the excavator. For customers looking to reposition on delicate surfaces or in confined spaces the optional hydraulic powered sideshift is available, allowing repositioning at the touch of a button.

OPTIMAL PERFORMANCE

EXCAVATOR CONTROLS

Each operator has preferences and, as Mecalac, we are able to offer a choice of excavator controls to suit those preferences. Mechanical excavator controls are available with a choice of driving control pattern. Servo excavator controls (joystick controls) are also available with an ISO/SAE switch that allows the control pattern to be adjusted by the operator as well as a proportional thumb slider control of the extendable dipper.

CURVED BOOM TO REACH OVER OBSTACLES

With its modern design, the curved style boom available on the Mecalac TLB890 and TLB990 provides the best level of performances and visibility when trenching.

OPTIMAL PERFORMANCE

PERFORMANCES LOADER

RIDE CONTROL - DISCOVER SMOOTH TRAVEL

The Ride Control system provides suspension to the front loader for further comfort and stability during travel across the building site or on the highway, eliminating also the risk of material spillage and reducing wear and tear of the machine. On Mecalac TLB890 and TLB990 the Auto Ride control automatically engages ride control above a set speed, that can be adjusted within the onboard computer.

RIDE CONTROL

NO RIDE CONTROL

SIMPLE AND AUTOMATED CONTROLS

Mecalac backhoe loaders can be put straight to work thanks to the intuitive single multifunction proportional control lever of the loader.

As standard, all Mecalac backhoe loaders offer automatic features to deliver operator comfort and reduced cycle times:

- A self levelling bucket system reduces spillage and retains the load in the bucket to full height

- Dual function control of the multi-purpose bucket delivers simultaneous clamshell and bucket operation (either a dual lever or on a multifunctional lever)
- A return to dig system automatically sets the working angle of the bucket
- A transmission disconnect button delivers increased lifting performance by disengaging the drive to the wheels and diverts the engine power to the loader hydraulics.

OPTIMAL PERFORMANCE

HIGHER AND HEAVIER LOADS

The robust Mecalac front loader is renowned for its high bucket breakout force of up to 55.4 kN (12455 lbf) and its exceptional lift capacity of up to 3966 kg (8744 lbs) at up to 3.6 m (11'9"). Thus, high-sided trucks are loaded easily from one side and fast discharge from the bucket is ensured by a remarkable 47° dump angle.

The single bucket cylinder provides maximum force for bucket breakout and maximum speed for bucket dumping as well as the best level of visibility over the load and the bucket corners.

ONE ATTACHMENT - PLENTY OF USES

The hydraulic or mechanical quick attach enables a wide range of attachments to be fitted. Versatility is even greater with the highly acclaimed multi-purpose front bucket which enables to dig, load, doze, spread, grab, level and lift with a capacity of up to 1.2 m³ (1.6 yd³). The optional fork kit makes possible to handle palletized loads of up to 1000 kg (2205 lb) without the need for a dedicated vehicle.

OPTIMAL PERFORMANCE

PERFORMANCES MOBILITY

SYNCHRO SHUTTLE OR POWERSHIFT

Propelled by either a 4 speed synchro shuttle transmission with manual gear selection or powershift transmission (servo power synchro) for automatic gear shifting, the Mecalac backhoe loader delivers excellent traction and speed up to 40 Km/h (25 mph) to make your operations smooth and productive.

OPTIMAL PERFORMANCE

EFFICIENCY IN DEMANDING APPLICATIONS

The high ground clearance, the large front axle oscillation of up to 16° and the four wheel drive fitted with premium brand tires enable to keep firm contact with the ground to maintain stability and productivity in the most severe terrains.

By activating the differential using the convenient floor mounted switch, 100% of the torque is delivered to both wheels and ensures maximum traction in all ground conditions.

MECALAC TLB990 - SELECTABLE STEERING MODE

The four-wheel steering system combined with the four-wheel drive and identical size wheels of the Mecalac TLB990 allow to keep working in conditions where other backhoes cannot. From the normal position with two wheel steering, you can select four wheel steering for a superior maneuverability with a turning circle of only 7.4 m (24'3") or crab steering mode to access into tight areas.
